

F SERVICE AUTOMATION

Automated systems for the paper products industry

COMPANY

TEAMWORK

Since 1979 we have been designing and building machinery for the paper products and printing industries, sectors in which we are specialized also from the standpoint of after-sales service.

Our machines are built to be reliable and durable, goals that we have achieved by going all-out on quality and listening to the recommendations of our customers, who have helped us to attain ever-higher standards.

A passion for excellence is the hallmark of our entire team and is an indispensable characteristic for becoming a member of it.

PRODUCTION

EXPERIENCE AND PASSION **MAKE THE DIFFERENCE**

Our machines have grown with us and with the technological evolution of the sector.

The experience accumulated in these last 40 years offers extensive added value, visible both in the mechanics of the products and on the level of the professional performances that they offer. From design to acceptance testing, to the choice of high-quality components, each step in construction is planned to ensure the longest duration over time and solid reliability. That's why after so many years our customers continue to place their trust in us.

PRODUCTS

PHOENIX

THE FASTEST ON THE MARKET

Phoenix is a glue plotter specially designed for companies that make exhibitors, window signs, totems, pull boxes, displays, packaging and much more.

PHOENIX

PHOENIX is the **fastest glue plotter on the market**, and not just because we like speed but because experience has taught us that it is necessary to deposit the glue as quickly as possible both to exploit all the “open time” of the hot-melt glue and to reduce rejects and enable the glue to work as well as possible.

In addition, we use the best gluing plants present on the international market, which, in combination with our products, **guarantee perfect gluing from the first piece to the last**.

The structure is made of steel, a material that makes it possible to make the most of the plotter's speed.

FEATURES OF THE STANDARD PLOTTER:

-  Machine size: 260x175 cm
-  Gluing speed: 2 m/s
-  Handling system operated by three brushless motors
-  Linear guides for high performance
-  Programming with Tablet, Android OS, and Wi-Fi communications
-  Workstations: four
-  Plotter structure: steel
-  Teleservice
-  Hot melt glue system complete with gear pump (tank capacity 5/10/15 kg)
-  Gun with Cavity Zero
-  Vinyl glue system complete with pneumatic pump and gun with Cavity Zero

ELEVATORS

ELEVATORS

HIGHER-LEVEL PRODUCTION AND QUALITY

*The elevators for high stacks were
created to increase production
and further improve gluing quality.*

ELEVATORS

The **ELEVATORS** are completely independent from the plotter and their use offers the following advantages:

- **30% production increase** compared to use of the platter with the table
- Loading height 75 cm
- **Better quality of gluing** because the distance between the glue plotter and cardboard remains constant
- **Ability to handle cardboards of different heights:** elevators can work individually or together for large formats
- **Extremely easy loading and adjustment of cardboards register**, thanks also to the wheels that make it possible to move the elevators easily

FEATURES OF THE ELEVATORS:

- ✚ Elevator size: 130x175 cm each
- 260 x 175 cm working together
- 📄 Loading height: 75 cm
- 📦 Maximum weight: 250 kg each
- ⊕ Sensor for automatic level restore
- ⚡ Motor and power supply independent from the plotter

ASSISTANCE

ALWAYS **AT YOUR SIDE**

Our technical department follows the assembly and start-up of the installation and assists customers through a complete consulting and after-sales service.

Maintenance can be carried out both in situ by sending technicians and remotely through our remote assistance service, which makes it possible to solve any problems directly from our facilities in the least time possible.
